

## Solutions for Mining, Oil & Gas

Mining and exploration companies working in harsh environments in remote locations rely on the critical exchange of information, not only to efficiently monitor and manage operations, but to serve as a lifeline. Novanet’s experience across all forms of communication technologies makes them the ideal supplier of complete wireless and satellite turnkey solutions for linking remote operations, allowing management to focus on their core business.

- long range communications for asset monitoring
- carry data, voice and video back to control centre / head office
- extend high-performance networks into the field with full support

Trusted provider of broadcast and information solutions
